<b>Action Information</b>		
<b>Description:</b> D'Onofrio called con-Ed to get clarification on the NRC report/situation. Mr. Sloate informed me that Con-Ed is doing soil work at their facility to up grade their SPCC plan and storm-harden their secondary storage system. During the site work, oil contaminated soils were encountered and containerized in a roll-off for disposal. The soil was sampled for disposal and the results indicated 1338 ppm for lead; for the 90 ton roll-off container they calculated 367 pounds of lead are contained in the soil. As per a recent company policy, this was called in as a release of lead, however; there is no active release and the soil is containerized and being prepped for disposal.
